A multiple glass bioreactor is a bioreactor designed for laboratory and pilot scale. It is usually composed of multiple independent or interconnected glass containers and is used for cell culture, fermentation process optimization and bioprocess research. Its transparent glass material facilitates real-time observation of the internal reaction process, and its modular design allows for simultaneous comparison experiments of multiple parameters (such as temperature, pH, dissolved oxygen concentration, etc.). Multiple glass bioreactors are widely used in biopharmaceuticals, food fermentation, environmental engineering, biological research and other fields, providing a reliable experimental platform for precise control and efficient development.

United States market for Multiple Glass Bioreactor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
