The global Multiple Light Beam Safety Device market size is predicted to grow from US$ 346 million in 2025 to US$ 477 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

A multiple light beam safety device is an optoelectronic protective system that uses several synchronized infrared light beams arranged in parallel to form an invisible safety field, typically installed around hazardous areas of machinery or automated systems. When any of the beams is interrupted by a person or object, the device immediately sends a stop signal to halt machine movement, helping to prevent accidents or injuries. Unlike single-beam sensors, multiple light beam safety devices provide broader area coverage and higher resolution, enabling them to detect objects of varying sizes across wide or tall access points. These devices are commonly used for perimeter guarding, access protection, and point-of-operation safety in applications such as robotic work cells, presses, palletizers, and automated storage systems.

United States market for Multiple Light Beam Safety Device is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
