Abstracts

The global Multiple Port Frame Grabber market size is predicted to grow from US$ 674 million in 2025 to US$ 1098 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

A multiple-port frame grabber is an image-acquisition hardware card designed to capture and process video or image data simultaneously from several cameras or imaging sensors. Installed in industrial PCs or embedded systems, it provides multiple high-speed input interfaces—such as Camera Link, CoaXPress, GigE Vision, or USB3 Vision—allowing synchronized multi-camera imaging for applications like machine vision, industrial inspection, medical imaging, and security. With onboard buffering, real-time image processing support, and high data-throughput capabilities, multiple-port frame grabbers enable precise, low-latency capture and integration of complex multi-view imaging systems.

In 2024, global multiple port frame grabber production reached approximately 3018.69 k units, with an average global market price of around US$ 214 per unit. And global multiple port frame grabber production capacity reached approximately 3500 k units. The average gross margin in this industry reached 19.72%.

The upstream segment consists of high-performance image-acquisition components, semiconductor chips, and industrial-grade connectors. Key inputs include FPGA/ASIC processors for high-speed signal processing, high-bandwidth interfaces (Camera Link, CoaXPress, GigE Vision), analog-to-digital converters, memory buffers, and robust I/O connectors and cables. Optical modules and machine-vision cameras from upstream partners also shape system requirements. These components determine data throughput, latency, and real-time processing capability. Representative upstream

suppliers include Xilinx/AMD (FPGA chips), Analog Devices (high-speed converters), and Samtec (high-bandwidth industrial connectors).

Downstream applications are primarily industrial and scientific imaging systems that require multi-camera synchronization and high-speed data capture. Typical users include machine-vision inspection lines, semiconductor manufacturing, medical imaging, traffic monitoring systems, robotics, and defense/aerospace imaging platforms. Integrators deploy multi-port frame grabbers to support simultaneous, high-resolution image acquisition for defect detection, motion analysis, and automation control. Representative downstream companies include Basler, Teledyne DALSA, and Cognex, which integrate multi-port frame grabbers into broader machine-vision solutions and automation systems for global industrial customers.
