Multiplex PCR Amplification Kit is a special product specially developed for multiplex PCR, including a complete set of reagents required for multiplex PCR experiments. Among them, Multi HotStart DNA Polymerase is the heat-resistant polymerase with excellent performance among all hot-start enzymes found so far. The enzyme uses chemical modification to achieve hot start, and must be heated at 95°C for 15 minutes to fully release the enzyme activity, ensuring high specificity. It can satisfy multiple sets

of PCR primers for good amplification in the same system, and perform multiple PCR reactions sensitively. The enzyme has no polymerase activity at low temperature or normal temperature, and can be prepared for PCR system at normal temperature. High-purity dNTPs can further ensure the specificity of amplification. If the template is special, the amplification effect can be improved by adjusting the concentration of Mg²⁺. The product has the characteristics of high specificity, high sensitivity and easy operation.
