The global Multiport Gigabit Managed PoE Switch market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A multi-port Gigabit managed PoE switch is a network device with several key features: Multi-port: This type of switch is usually equipped with multiple Ethernet ports, allowing multiple devices (such as computers, printers, IP cameras, etc.) to connect to the same network. Gigabit speed: Each port supports gigabit (1 Gbps) data transfer rates, providing faster network connections for applications requiring high bandwidth. Managed: Managed switches allow network administrators to configure and manage through software interfaces, providing more advanced functions such as VLAN (Virtual LAN), QoS (Quality of Service), network monitoring and troubleshooting, etc. PoE (Power over Ethernet): PoE technology enables the switch to provide power to connected devices through an Ethernet cable, eliminating the need for additional power cords. This is especially important for devices such as IP cameras and wireless access points. This kind of switch is widely used in scenarios such as enterprise networks, monitoring systems, and smart buildings, and can effectively manage and power multiple network devices.
