The global Multiport Manifold market size is predicted to grow from US\$ 2129 million in 2025 to US\$ 2959 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Multiport manifolds are integrated fluid or gas distribution components designed to manage, route, and control multiple flow channels within a compact structure. They are widely used in hydraulic systems, pneumatic automation, analytical instruments, medical devices, and industrial process control equipment. In 2025, the average global selling price of multiport manifolds is approximately US\$320 per unit, with global sales volume reaching around 6.8 million units. The industry typically maintains a gross margin range of 25%–40%, supported by precision machining, material selection, sealing reliability, and application-specific customization. The supply chain includes upstream metal materials and sealing components, midstream machining, surface treatment and assembly, and downstream demand from industrial equipment manufacturers, automation system integrators, medical device companies, and laboratory instrument producers.

In 2025, the multiport manifold market continues to grow steadily, driven by increasing system integration requirements across industrial automation, analytical instrumentation, and medical equipment. As equipment manufacturers seek compact designs, reduced leakage risk, and simplified installation, integrated manifold solutions are increasingly favored over discrete fittings and tubing assemblies. Demand growth is particularly evident in precision instruments and medical applications, where reliability and cleanliness standards are high. Manufacturers with strong design capabilities and flexible customization options are better positioned to capture higher-value segments.
