The global Multisensor and Optical CMM market size is predicted to grow from US$ 1132 million in 2025 to US$ 1822 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2024, global Multisensor and Optical CMM production reached approximately 30,175 units, with an average global market price of around US$ 35,200 per unit. Gross margin is about 47%. The cost is 18,656 usd. Production Capacity is about 33,000-37,000 units. A Multisensor Coordinate Measuring Machine (CMM) is an advanced measurement device that integrates multiple types of sensors to perform precise and comprehensive three-dimensional measurements of an object's geometry. These machines are designed to combine the strengths of various sensor technologies, such as tactile probes, laser scanners, and optical sensors, to offer versatile and accurate measurement solutions. The upstream and downstream industrial chains of Multisensor and Optical CMM mainly include: the upstream is suppliers of high-precision optical lenses, lasers, probes, image sensors, control software, precision mechanical parts and metal materials, etc., to ensure that the equipment has high resolution and stability; the midstream is CMM equipment manufacturers, which integrate various sensing technologies such as contact detection, vision systems and laser scanning into the three-coordinate platform to form equipment that can adapt to complex workpiece inspection; the downstream is for customers in industries such as aerospace, automobile manufacturing, medical equipment, electronic semiconductors and precision molds, and is used for high-precision dimensional measurement, form and position tolerance detection and quality control, thereby promoting the automation of the manufacturing process and digital quality management.
