A multistage centrifugal pump is a rotating device that converts kinetic energy into a liquid head. This is one way of defining a centrifugal pump. There are many more, but for us, this is enough. In simple language, you can say that it is a machine used to transport fluids from one place to another. Multistage industrial pumps are used in all facilities such as refineries, oil production platforms, petrochemical plants, power plants, etc. Of course, multistage pumps are also used in other industries such as agriculture, food processing and residential construction as well as water supply.

The global Multistage Metal Centrifugal Pump market size is projected to grow from US\$ 6557 million in 2024 to US\$ 8025 million in 2030; it is expected to grow at a CAGR of 3.4% from 2024 to 2030.
