The muon imaging detection system is an imaging technology system that uses the properties of high-energy cosmic ray muon particles penetrating matter. It detects and reconstructs the muon trajectory after penetrating an object to obtain its internal structure or density distribution information. The system does not require an artificial radiation source and has the advantages of strong penetration, non-destructiveness, and can be used for imaging thick and heavy materials. It is widely used in nuclear safety testing, geological exploration, security inspection and bomb disposal, cultural relics detection, and industrial non-destructive testing.
