The global Mushroom Cultivation market size is predicted to grow from US\$ 7043 million in 2025 to US\$ 9805 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Mushroom Cultivation refers to the controlled or semi-controlled production of edible and medicinal mushrooms through processes such as spawn inoculation, substrate preparation, and management of temperature, humidity, and ventilation. The industry covers multiple stages including spawn production, growing medium formulation, fruiting management, harvesting, and primary processing. Major products include button mushrooms, shiitake, oyster mushrooms, enoki mushrooms, and various functional or medicinal species, serving food consumption, health nutrition, and pharmaceutical-related applications.

The global Mushroom Cultivation market is large in scale and continues to grow steadily, driven by the rising popularity of healthy diets, increasing demand for plant-based protein, and expanding consumption of functional foods. Asia-Pacific, particularly China, represents the largest production and consumption region worldwide, supported by mature cultivation techniques, an integrated supply chain, and strong domestic demand. Europe and North America are characterized by facility-based production, standardization, and higher value-added products. In recent years, the adoption of industrialized cultivation systems, smart environmental control, and sustainable agricultural practices has improved production efficiency and product consistency. Overall, the industry is evolving toward larger scale operations, technological upgrades, and diversified mushroom varieties.
