The music trail is an innovative trail design that integrates technology, art and entertainment. It aims to provide pedestrians with a new walking experience by incorporating music elements. The music trail is a road surface that can emit pleasant music when pedestrians walk. It embeds raised structures of specific shapes, materials and spacing into the road surface, and uses the principle of sound conduction to make the road surface a natural 'musical instrument'. When pedestrians walk on it, each step will trigger the corresponding music effect, as if playing a beautiful melody. Music trails are widely used in various scenic spots, parks, campuses and other places. In these places, music trails not only provide pedestrians with a new walking experience, but also enrich the cultural connotation and interactive experience of the place. For example, setting up a music trail in a park can attract more tourists to experience it; setting up a music trail on campus can provide teachers and students with a good place to relax and enjoy music.
