The global Mutual Capacitance Chip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Mutual capacitance chip is a precision electronic component designed based on projected capacitance technology. It intentionally creates mutual capacitance effect between row and column electrodes of the touch screen, so that detectable capacitance changes are formed at the intersection of the electrodes. This design allows system electronics to independently measure each node (intersection) in a single screen scan, thereby achieving real-time detection and identification of multiple touch points on the screen. With its high sensitivity and ability to detect multiple touch points simultaneously, mutual capacitance touch chip provides excellent touch response and user experience. It is suitable for application scenarios that require high-precision multi-touch and has become one of the core technologies of the interactive interface of modern smart devices.
