MV Aerial Bundled Cable is a type of overhead power cable designed for medium voltage transmission and distribution, typically within the range of 6 kV to 35 kV. Unlike traditional bare conductors, MV Aerial Bundled Cables consist of multiple insulated conductors that are bundled together, often using XLPE (cross-linked polyethylene) insulation. These cables may include a neutral messenger or be self-supporting, and are typically installed on poles using clamps and suspension devices. MV Aerial Bundled Cables are specifically engineered to enhance safety, reduce electrical faults, and improve reliability in overhead power distribution networks. The insulation layer prevents direct contact between conductors, thereby significantly minimizing the risk of phase-to-phase short circuits, electrical outages caused by falling tree branches, and accidental human contact. These features make MV Aerial Bundled Cables particularly suitable for densely populated urban areas, forested regions, mountainous terrain, and locations where space constraints or environmental hazards pose challenges to conventional bare conductor systems.

United States market for MV Aerial Bundled Cable is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for MV Aerial Bundled Cable is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
