The global MV-Transformers market size is predicted to grow from US\$ 13210 million in 2025 to US\$ 17470 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

The MV-Transformer is a type of transformer, generally, the input voltage is between 1KV~10KV, which can provide the final voltage transformation in the distribution system, reducing the voltage used in the distribution line to the level used by the customer.

Instead of using fossil fuels to run generators, most end users are turning to other types of electricity or energy sources. All types of electrical end customers are increasingly interested in these alternative energy sources, including solar panels, wind turbines, and more. Adoption of these renewable energy sources in many countries is expected to drive the market for medium voltage transformers used in power transmission and distribution. Self-regulating, self-contained smart transformers are gaining popularity. Medium voltage transformers are designed to communicate with the user and provide data and insights about the power supply while maintaining voltage regulation. Increasing applicability across sectors, stations, grids, control panels, and switchgear for metering and safety purposes increases the demand for medium-sized power transformers. Energy consumption is growing due to rapid urbanization in emerging countries and the expansion of transmission and distribution (T&D) networks to incorporate renewable energy. Moreover, significant changes are being made in the transmission and distribution system to reduce losses, which requires upgrading of electrical components such as medium voltage transformers, which is likely to drive the demand for medium voltage transformers. Dependence on fossil resources and carbon emissions are also rapidly increasing. Therefore, to reduce this dependence, the use of

renewable energy is encouraged. Many countries are planning to adopt these renewable energy sources, which is expected to increase the demand for transmission and distribution medium voltage transformers.
