Mycelium protein is a sustainable and nutritious alternative protein source derived from fungal mycelium, the thread-like network of cells that forms the vegetative part of fungi. This protein is produced through fermentation processes that involve cultivating fungi in controlled environments. Mycelium-based proteins are gaining attention for their ability to be grown with minimal environmental impact, utilizing agricultural waste as a substrate. Rich in essential amino acids, mycelium protein is considered a complete protein source and has the potential to be used in various food products, including plant-based alternatives, contributing to the development of sustainable and eco-friendly protein options in the food industry.
