In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Mycology Immunoassays Testing market for 2018-2023.

The frequency of invasive fungal infections has dramatically increased in the recent years and has high mortality and morbidity. Accurate and early diagnosis is very important for the appropriate antifungal therapy. Conventional techniques like microbiology, radiological and histological remain the basis of diagnosis but have limited impact on clinical decision making. There is always a need to characterize fungi accurately and quickly, which can be done by mycology immunoassays test. The fungi are parasitic and saprophytic eukaryotic organisms. The diagnostic methods for fungal infections are direct examination, radiology, and fungal culture and non-culture methods.

Over the next five years, LPI(LP Information) projects that Mycology Immunoassays Testing will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
