Mycoplasma spray is a disinfection product used to kill or inhibit mycoplasma contamination. It is widely used in microbial control scenarios such as cell culture laboratories, animal experimental environments, and tissue culture rooms. Mycoplasma is a common source of cell contamination. Because it has no cell wall and is not easily removed by conventional antibiotics, the specially developed spray has the advantages of high efficiency, rapidity, and no toxic residue.

This type of spray can be divided into two categories according to its ingredients and uses: laboratory environmental spray and cell culture external protection spray. The former is mainly used for air, countertops, and equipment disinfection, while the latter is used to prevent cross contamination or external treatment of suspected contamination. Common brands include Minerva Biolabs, Lonza, ScienCell, Biyuntian, etc. The common specifications are 250-500ml, and the price range is about RMB 100-500**. The price of imported products is slightly higher.

With the continuous improvement of laboratory quality control standards and the strengthening of aseptic operation requirements, mycoplasma spray is developing towards more efficient, low toxicity, no residue and sustainable pollution inhibition. Some products also combine the composite functions of virus and fungus removal. At the same time, environmentally friendly formulas and certified products for cleanroom

use are gaining attention.
