Mycorrhiza Bio Fertilizers are soil inoculants containing beneficial mycorrhizal fungi that form symbiotic associations with plant roots, enhancing nutrient uptake, particularly phosphorus, and improving soil structure and water retention. These fungi colonize plant roots, extending their hyphal network into the soil, which increases the plant's access to nutrients and water while also providing resistance to certain pathogens and environmental stresses. Mycorrhiza biofertilizers are eco-friendly and sustainable, reducing the reliance on chemical fertilizers and promoting healthier plant growth in various agricultural and horticultural systems.
