The global Mycotoxin Deactivators market size is predicted to grow from US$ 2173 million in 2025 to US$ 2648 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Mycotoxin Deactivators refer to a class of additives specifically used in feed to remove or neutralize the harmful effects of mycotoxins (such as aflatoxins, vomitoxin, geraralenone, etc.) in feed. Mycotoxins are toxic chemicals produced by molds, which are widely present in grains and feeds, and are prone to contamination, especially under humid and improper storage conditions. These toxins are significantly harmful to animal health and may cause poisoning, immunosuppression, decreased production performance and other problems. Mycotoxin Deactivators can effectively remove or render harmless mycotoxins through physical adsorption, chemical detoxification or biodegradation mechanisms, reduce their accumulation in animals, thereby ensuring animal health and growth, and improving feed safety and production efficiency.

United States market for Mycotoxin Deactivators is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Mycotoxin Deactivators is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
