Mycotoxin Detoxifying Agents are substances or compounds that are specifically designed to neutralize or eliminate the harmful effects of mycotoxins in animals, humans, or crops. These agents function by either chemically binding to mycotoxins, converting them into non-toxic forms, or promoting their breakdown and removal from the organism's system. Unlike mycotoxin deactivators, which often work by preventing mycotoxins from being absorbed in the first place, detoxifying agents may also facilitate the metabolic transformation or degradation of mycotoxins within the body or environment. Common detoxifying agents include certain types of clay minerals, activated charcoal, enzymes, and microbial products that break down mycotoxins in the gut or within tissues. These agents are widely used in animal feed to reduce the harmful impact of toxins like aflatoxins, ochratoxins, and fumonisins, which can compromise health, growth, reproduction, and overall productivity.
