## Abstracts

The global Myosin Inhibitors market size is predicted to grow from US\$ 908 million in 2025 to US\$ 2058 million in 2032; it is expected to grow at a CAGR of 12.8% from 2026 to 2032.

In 2025, global Myosin Inhibitors production reached approximately 114.3 K Units, with an average global market price of around 8124 USD per Unit.

Myosin Inhibitors are a class of targeted therapies—typically small molecules—that directly bind to cardiac (?-) myosin in heart muscle and reduce the number and/or force of actin–myosin cross-bridges formed during contraction. By dampening excessive contractility and lowering myocardial energy use, they can decrease hypercontractility and obstruction and improve filling dynamics, and are most prominently used (or developed) for hypertrophic cardiomyopathy (especially obstructive HCM) and related hypercontractile cardiac conditions.

Myosin Inhibitors are gaining momentum because they directly address a long-standing gap in hypertrophic cardiomyopathy and other hypercontractile conditions: for many patients, traditional care has centered on symptom management or invasive procedures rather than precisely dialing down the excessive contractile force that drives obstruction, impaired filling, and day-to-day limitation. By selectively modulating cardiac myosin—the core molecular engine of contraction—these therapies offer a mechanism-based way to reduce hypercontractility and improve cardiac dynamics without permanently altering heart anatomy, while their titratable nature supports a more individualized balance between symptom relief and preservation of systolic function.

Myosin Inhibitors primarily source upstream raw materials including basic chemical raw materials such as nitrogen-containing heterocyclic compounds and chiral amines, key intermediates, and excipients. Typical raw material suppliers include Merck, Bio-

Techne, InvivoChem, and Enamine.

The single-line production capacity of Myosin Inhibitors varies significantly depending on the drug molecule type, process complexity, equipment scale, and production mode. Industry gross margins typically range from 60% to 80%.

United States market for Myosin Inhibitors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
