The global Myostatin market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Myostatin, also known as growth differentiation factor-8 (GDF-8), plays a key role in regulating muscle growth in animals, including humans. It is a member of the transforming growth factor-beta (TGF-?) superfamily, which is involved in regulating various cellular processes such as cell growth, proliferation, differentiation, and apoptosis. Myostatin is a protein that negatively regulates muscle growth by inhibiting muscle cell proliferation and differentiation. It is crucial for maintaining balanced muscle development and is encoded by the MSTN gene. Myostatin's activity has implications for muscle-wasting diseases and muscle hypertrophy, making it a target for therapeutic research.

United States market for Myostatin is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
