The global N-Formyl Peptide market size is predicted to grow from US\$ 28.27 million in 2025 to US\$ 46.38 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

N-formyl peptides refer to a type of peptide containing an N-formyl group (formyl group bonded to a nitrogen atom). In biochemistry, N-formyl peptide usually refers to a peptide chain with a formyl group at the N-terminus. This modification is usually achieved through an enzymatic formylation reaction. N-formylation modification may affect the stability, hydrophilicity, interactivity and other properties of the peptide, thereby regulating the biological function of the peptide.

As an important branch in the field of biotechnology and chemistry, the N-formyl peptide market has shown steady growth in recent years. With the rapid development of biomedical technology, the demand for N-formyl peptides is increasing year by year. Especially in the fields of new drug research and development, biotherapy and diagnostic reagents, N-formyl peptides are in great demand as important active ingredients or research tools. In addition, in addition to the traditional pharmaceutical field, the application of N-formyl peptides in agriculture, chemical industry, food and other fields is also gradually expanding. For example, in the agricultural field, N-formyl peptides can be used as biopesticides or plant growth regulators; in the chemical industry, they can be used to synthesize new functional materials. In summary, the N-formyl peptide market is currently in a stage of stable growth and has broad development prospects.
