N-Stearyl Erucacinamide (SE) is an amide product containing two long carbon chains, which has higher stability, is suitable for processing temperatures higher than single carbon chain amides, and has a slower migration rate than single carbon chain amides. For example, it is suitable for higher processing lubrication requirements such as nylon. In addition, stearic erucic acid amide, due to its long carbon chain with both rare double bonds and saturated long carbon chain, has the requirements of balancing lubrication and demolding performance.

The global N-Stearyl Erucacinamide (SE) market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
