NaCl optics refer to optical components made from sodium chloride (NaCl), which is a crystalline material commonly known as table salt. NaCl optics are used in various applications due to their specific optical properties. NaCl optics are valuable in various fields that require components with broad transparency in the UV to IR spectrum, low absorption in the IR range, and isotropic properties. Despite their limitations, with proper handling and storage, NaCl optics serve as critical elements in numerous optical applications.

The global NaCl Optics market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
