Commonly known as rock salt, Sodium Chloride is a soft, soluble and hygroscopic material. It transmits over a wide wavelength range from approximately 0.25 to 16 μ m, making it an ideal choice for lenses and other optical components used in the UV and IR ranges. Sodium Chloride has a maximum operating temperature of 400°C and needs to be protected from atmospheric conditions to avoid moisture degradation. It is recommended that coatings be applied where the material is exposed and that a high standard of polishing be achieved under humidity controlled conditions. It has a hardness of HK18.2, which is soft, so it needs to be handled with care.

The global NaCl Windows market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
