According to this study, the global Nano-antibody CDMO Services market size will reach US\$ 1499 million by 2031.

Nano-antibody CDMO service provides biopharmaceutical companies with full-process outsourcing support for nano-antibody drugs from research and development to commercialization, covering modules such as antibody screening, humanization, expression optimization, process development, GMP pilot production, formulation development and clinical application support. Compared with traditional IgG antibodies, nano-antibodies have the advantages of small size, strong penetration, easy modification, and high expression efficiency. They are widely used in tumor immunity, inflammation, autoimmunity, imaging diagnosis and inhalation preparations. With the rapid growth of the global nano-antibody drug pipeline, CDMO service platforms that focus on this type of molecule continue to develop and become an important sub-track in antibody CDMO, with high added value and high technical barriers.

United States market for Nano-antibody CDMO Services is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
