The global Nano ATO Powder market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Nano ATO powder, also known as Nanocrystalline Antimony-doped Tin Oxide Powder, is a type of metal oxide powder used in various industrial applications. It is typically produced through a proprietary process that involves the controlled synthesis of antimony-doped tin oxide particles through the hydrolysis of tin and antimony precursors.

As electronic devices become more sensitive and miniaturized, the risk of electrostatic discharge (ESD) damage is a growing concern. Nano ATO powder is an excellent material for producing anti-static coatings, which prevent the buildup of static electricity on surfaces and reduce the risk of ESD damage. Nano ATO powder also is being used in the production of solar panels to enhance energy conversion efficiency. Due to its unique properties, it can improve the conductivity and light absorption of the transparent top electrode of the panel.
