Nano-nickel powder is a high-end metal powder material for electronics, and MLCC is one of its main application areas. Nickel powder has good sphericity, high tap density, high conductivity, low electric mobility, good corrosion resistance and heat resistance to solder, high sintering temperature, and good high-temperature co-firing with ceramic dielectric materials characteristic. The development trend of chip and miniaturization of electronic components has made the metal powder materials for MLCC manufacturing shrink from the micron level to the nano level.
