Abstracts

The global Nanobody Humanization Service market size is predicted to grow from US$ 108 million in 2025 to US$ 156 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Nanobody humanization services involve genetic engineering to modify the sequences of nanobodies (VHH or VNAR) derived from non-human species such as camels or sharks, aligning their framework regions (FR) as closely as possible to human antibody sequences. This reduces their immunogenicity in the human body and improves their safety and compatibility in clinical treatment and diagnostic applications. This service typically includes sequence analysis, humanization design, affinity-restoring mutations, expression verification, and functional testing. It is widely used in the development of humanized nanobody drugs, targeted diagnostic probes, and biosensors, and is a key step in promoting the clinical translation of nanobodies.

United States market for Nanobody Humanization Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nanobody Humanization Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
