Abstracts

The global Nanobody Sequencing Service market size is predicted to grow from US$ 139 million in 2025 to US$ 197 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Nanobody sequencing services use high-throughput sequencing and bioinformatics analysis to rapidly obtain the complete variable region gene sequence of a nanobody (VHH) from immune animals (such as camels and alpacas) or libraries. This service typically includes RNA extraction, cDNA synthesis, specific PCR amplification, library construction and sequencing, sequence assembly, CDR region identification, germline tracing, and affinity prediction. It aims to accurately identify the amino acid and nucleotide sequences of functional nanobodies, providing critical foundational data for subsequent expression, humanization, affinity optimization, and drug development. It is the core first step in the discovery and engineering of nanobodies.

United States market for Nanobody Sequencing Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nanobody Sequencing Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Nanobody Sequencing Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
