The global Nanocrystalline Magnetic Shielding Sheet market size is predicted to grow from US\$ 46.01 million in 2025 to US\$ 65.57 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Nanocrystalline Magnetic Shielding has an extremely good weight to noise suppression ratio, making it an excellent choice to mitigate the magnetic noise generated from inductors in electronic devices, which are easily affected by magnetic fields or fluctuating magnetic fields. It is also used for magnetic shielding of buildings adjacent to power lines or power distribution installations.

Amorphous nanocrystalline soft magnetic materials are known as the new green energy-saving materials in the 21st century due to their excellent properties such as high permeability, high saturation magnetic induction strength, low loss, good thermal stability, etc. Coupled with their simple process and low cost, they are now widely used in many industries such as communications, industry, new energy, power electronics, etc. Chinese amorphous nanocrystalline soft magnetic material enterprises have become the main force in the production and manufacture of amorphous nanocrystalline products. At present, China's amorphous nanocrystalline strip technology is more mature, can be achieved through the melt state of the rapid cooling method of ultra-thin strip mass production, to meet the demand for applications in the field of soft magnetic. It is reported that more and more enterprises in China choose to amorphous nanocrystalline materials as their main products, to promote high-frequency electronic products, miniaturization and environmental protection and energy saving, the development of China's electronics manufacturing industry has played an important role.
