The global Nanoimprint Lithography Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Nanoimprint Lithography (NIL) Machine is a precision tool used in the semiconductor and nanotechnology industries to create nanoscale patterns on a substrate. This machine employs a mold or stamp with nanoscale features, which is pressed onto a resist-coated substrate to imprint the desired pattern. The process can achieve high-resolution and high-throughput patterning, making it ideal for manufacturing components like microchips, optical devices, and nanoelectromechanical systems (NEMS). NIL is valued for its cost-effectiveness and ability to produce extremely fine details that are difficult to achieve with traditional photolithography techniques.
