Nanomedicine Manufacturing Services provides specialized technical services covering the entire lifecycle of nanomedicines, from R&D to commercial production. Based on GMP and other regulatory standards, and leveraging nanocarrier technologies (such as liposomes and polymer nanoparticles) and precision manufacturing processes, it enables the construction, production, and quality control of nanoscale drug delivery systems. Its services encompass custom synthesis of nanocarriers, development of drug encapsulation processes, preclinical/clinical sample preparation, and large-scale GMP production. Simultaneously, through technologies such as dynamic light scattering and high-performance liquid chromatography, it detects key quality attributes such as particle size distribution, encapsulation efficiency, and drug release, ensuring that products meet safety, efficacy, and compliance requirements. This helps transform nanomedicines from laboratory findings into clinically usable therapeutic products, meeting the precision treatment needs in fields such as oncology and cardiovascular diseases.
