## Abstracts

According to this study, the global Nanoparticle Tracking Analysis Technology(NTA) market size will reach US\$ 1179 million by 2031.

Nanoparticle Tracking Analysis (NTA) is a method that uses the principles of light scattering and Brownian motion to detect the particle size distribution of samples in liquid suspensions. By tracking the movement of individual nanoparticles in liquids, NTA can provide detailed information on the particle size distribution. The advantages of this technology are its high resolution, rapid detection and high accuracy, which can comprehensively characterize particles with a wide range of particle sizes in suspensions. This makes NTA widely used in nanomaterials, drug delivery, environmental monitoring and other fields.
