The global Nanoporous Materials market size is predicted to grow from US$ 8038 million in 2025 to US$ 10700 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Nanoporous materials comprises of regular organic or inorganic framework that supports a porous structure. The size of these pores is primarily between 100 nanometers and can even be smaller. Nanoporous materials are classified into two broad categories including bulk materials and membranes. Nanoporous membranes include cell membranes while activated carbon and zeolites are examples of bulk nanoporous membranes. Nanoporous materials are manufactured out of natural raw materials; however, artificial nanoporous materials can also be produced. Nanoporous materials with evenly sized pores have the ability of letting only certain substances pass through, while blocking others.

United States market for Nanoporous Materials is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Nanoporous Materials is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
