The global Nanopowder market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Nanopowders are solid powders of nanoparticles, often containing micron-sized nanoparticle agglomerates.

Nanopowder refers to a finely powdered substance made of various materials such as metals and their alloys on nanoscale. Though nanotechnology is considered to be a novel invention, archaeological studies indicate that humans have been producing as well as using nanoscale products since ancient times. Measured in nanometers, nanopowders are produced by heat treatment and grinding of substances. Nanoscale production requires significantly high precision for controlling conditions, which yields powders in accurate composition and size.
