The global Nanoscale Dental Filling Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The main dental filling materials include: silver amalgam, composite resin, glass ionomer, etc. The different materials will stimulate the pulp, soften the dentin, mineralise it, form restorative dentin and withstand chewing pressure etc.

According to a report released by Evaluate Medtech, the global dental device market will grow from US\$12.4 billion in 2015 to US\$18.3 billion in 2022, with a compound annual growth rate of about 5.7%. The social needs brought about by the aging population, the high incidence of oral diseases and the room for further improvement of services have laid a solid foundation for the development of oral medical devices. In the future, with the application of new technologies such as VR/AR technology and 3D printing, it will have a major impact on the entire dental industry.
