According to this study, the global Nanowire Battery market size will reach US\$ 175.5 million by 2030.

A nanowire battery uses nanowires to increase the surface area of one or both of its electrodes. Some designs (silicon, germanium and transition metal oxides), variations of the lithium-ion battery have been announced, although none are commercially available. All of the concepts replace the traditional graphite anode and could improve battery performance.

Nanowire batteries are capable of hundreds of thousands of recharges cycles and with the existence in real world, these batteries can change the future of energy storage. Global Nanowire Battery Market is expected to grow rapidly during the forecast period and as various technologies are coming into picture to make the Nano Technology a reality, soon nanowire batteries will eliminate the traditional batteries.
