The global NaOH Scrubber market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

An NaOH scrubber, also known as a caustic scrubber or sodium hydroxide scrubber, is a type of air pollution control device used to remove acidic gases, such as sulfur dioxide (SO₂) and hydrogen chloride (HCl), from industrial exhaust streams.

The NaOH scrubber market is influenced by several factors and market trends. Governments and environmental agencies are imposing stricter emission regulations to reduce air pollution and mitigate the release of harmful gases and particulate matter into the atmosphere. NaOH scrubbers are widely used to remove acidic gases, such as sulfur dioxide (SO₂) and hydrogen chloride (HCl), from industrial flue gases. The increasing stringency of emission regulations is driving the demand for NaOH scrubbers in industries such as power generation, chemical manufacturing, and refining. The Asia-Pacific region, including countries like China, India, and Southeast Asian nations, is experiencing rapid industrialization and urbanization. This has resulted in increased air pollution concerns and stricter emission regulations. As a result, the demand for NaOH scrubbers in the region is expected to grow significantly to address air quality issues and meet regulatory requirements.
