Naphthalene Type Epoxy Resin refers to an epoxy resin in which the molecular backbone contains one or more naphthalene rings (a fused aromatic bicyclic structure). It is typically produced by glycidylation/epoxidation of naphthalene-based phenols/diols (or naphthalene-based novolacs, sometimes naphthalene-based amines), forming epoxy-functional oligomers or resins. Owing to the rigid aromatic naphthalene structure, it is commonly used where high glass-transition temperature (T_g), thermal stability, stiffness, low dielectric loss, and dimensional stability are required, especially in electronics and advanced composites.

United States market for Naphthalene Type Epoxy Resin is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
