Nasal intermittent positive pressure ventilation (NIPPV) provides intermittent positive pressure ventilation on the basis of nasal continuous positive airway pressure (nCPAP), simulating intermittent mechanical ventilation through non-invasive means, and providing a new option for non-invasive respiratory support for neonates. NIPPV has certain advantages over nCPAP in initial non-invasive respiratory support and respiratory support after extubation, and is also helpful in treating more severe apnea of prematurity. In particular, synchronous NIPPV has a good application prospect.
