The global Nasal Packings market size is predicted to grow from US\$ 304 million in 2025 to US\$ 404 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

The Nasal Filler is a bioabsorbable woven fleece that can be used dry or hydrated after Functional Endoscopic Sinus Surgery (FESS). Doctors who use nasal packing have observed better healing in clinical studies.

The Nasal Packings market will be driven by an increase in nasal injuries due to accidental injuries, a surge in nasal and cosmetic procedures, and technological advancements in nasal surgery. Nasal Packings are primarily used after functional endoscopic surgery to prevent ongoing bleeding and manage the wound healing process. Nasal Packings help maximize absorbency as well as wick away fluid, which helps minimize pain and the chance of rebleeding after removal. Nasal Packings have major applications in sinus surgery and wound care. The introduction of biodegradable materials has created new revenue for the product.
