A nasal pillow negative pressure mask is a device with a lighter design that only covers the area around the nostrils, rather than the entire nose or mouth, by placing a small nasal pillow (providing a seal) at the nostril entrance to ensure that air is delivered directly to nasal passages. Negative pressure refers to a pressure state that is lower than the surrounding atmospheric pressure. In the context of respiratory devices, negative pressure masks are designed to keep the pressure inside the mask lower than the pressure outside. This helps prevent contaminants from entering the mask and facilitates air flow in a controlled manner.
