The global Natural Aloe Extract Powder market size is predicted to grow from US\$ 988 million in 2025 to US\$ 1351 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

In 2025, global production of natural aloe extract powder reached 7,654 tons, with an average selling price of US\$132 per kilogram. Natural aloe vera extract powder refers to a powder raw material made from the 'gel/inner leaf' of aloe vera leaves or the 'whole leaf juice' after decolorization and purification. This powder undergoes stabilization, filtration, purification, and concentration, followed by dehydration through spray drying or freeze-drying. Its core value lies in transforming the originally highly water-content aloe vera gel (which is prone to microbial growth, has high transportation costs, and poor stability) into a 'high-solids-content, traceable, and standardized' plant extract form that facilitates cross-border supply chain circulation. Key quality control indicators (polysaccharide/acetylglucan, anthraquinone residues such as aloin, microorganisms, heavy metals, pesticide residues, etc.) meet regulations and customer standards for food, dietary supplements, and cosmetics. Downstream applications are concentrated in the food and beverage (functional drinks, aloe vera fruit drinks, yogurt/jelly, etc.), health products (tablets/capsules, powder preparations, gummies, etc.), and daily chemical and personal care (soothing and moisturizing gels, creams, masks, after-sun repair products, oral care, etc.) sectors. The upstream of the industry chain is aloe vera cultivation (tropical/subtropical regions, fresh leaves need to be processed as soon as possible after harvesting to inhibit enzymatic degradation and microbial risks), the midstream is primary and deep processing (peeling/crushing for juice extraction ? coarse filtration ? decolorization and purification/membrane filtration ? pasteurization or aseptic stabilization ? concentration or drying ? standardization and batch release), and the downstream is formulation plants and manufacturers. The gross profit margin is

approximately 15%–35%.
