## Abstracts

The global Natural Cooling Linear Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Natural cooling linear motors dissipate the heat generated inside the motor to the external environment through natural convection, thereby maintaining the working temperature of the motor within the normal range. Its working principle is similar to that of a regular linear motor, both of which are based on the action of magnetic field force to achieve linear motion, except for the difference in heat dissipation method.
