Natural cosmetic preservatives are substances added to cosmetics in order to inhibit the growth and reproduction of microorganisms in cosmetics. Cosmetics with more moisture have a greater demand for lotions, lotions and other preservatives. The closer to ointment or wax cosmetics, the harder it is for microorganisms to survive, and the demand for preservatives is relatively small. Common cosmetic preservatives include benzyl alcohol, benzoic acid, salicylic acid, boric acid, sorbic acid and other alcohols, aldehydes and other substances.
