Natural Gas Separation Membrane Module utilizes membrane technology to selectively remove impurities and separate valuable components from natural gas streams. Operating based on the principle of differential gas permeability through the membrane material, it allows specific gases, such as carbon dioxide and hydrogen sulfide, to permeate more readily than others, resulting in purified natural gas with reduced impurities. These modules find applications in carbon dioxide removal for pipeline quality specifications, hydrogen sulfide removal for safety, and nitrogen removal for energy content optimization.

The global Natural Gas Separation Membrane Module market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
