Natural graphite sheet refers to a material composed of stacked layers of graphene, which is a single layer of carbon atoms arranged in a hexagonal lattice. It is derived from naturally occurring graphite, which is a form of carbon that typically exists in large quantities in various geological formations.

Natural graphite sheets are known for their excellent thermal conductivity, flexibility, and lightweight nature. They are often used in applications where efficient heat dissipation is crucial, such as in electronic devices like smartphones, laptops, and LED lighting. These sheets can efficiently transfer heat away from heat-generating components, thereby helping to maintain optimal operating temperatures and prolonging the lifespan of the devices.

The global Natural Graphite Sheet market size is projected to grow from US\$ 2108 million in 2024 to US\$ 2958 million in 2030; it is expected to grow at a CAGR of 5.8% from 2024 to 2030.
