Abstracts

According to this study, the global Natural Material Packaging market size will reach US\$ 1363 million by 2031.

Natural material packaging refers to eco-friendly packaging solutions derived from renewable biomass like sugarcane bagasse, plant cellulose (bamboo/straw pulp), and mycelium (mushroom root networks). Processed via physical pressing, bio-fermentation, or chemical modification, these materials offer biodegradability (decomposing within 180 days), low-carbon production (>60% emission reduction vs. plastics), and tunable durability (e.g., mycelium-based cushioning). Applications span food containers, electronics padding, and shipping fillers, with pioneers like Ecovative (mycelium) and Bamboo BioComposites. Aligned with circular economy principles, they meet compostability standards (e.g., EU EN13432), serving as sustainable alternatives to synthetic plastics.
